Things you should know before you start

1. What is the difference between Release_a/b and
   Release_part1/2
   ▪ Release_a/b denote different datasets from the same
     center. There could for instance be a difference in
     TR or the number of volumes. Unless indicated these
     datasets are collected on the same magnet.
   ▪ Release_part1/part2 indicates different parts of the
     same dataset. In this case the data for this center
     were split to keep the file size of the archive
     reasonable.

2. Each release includes a subject list.
   (Release_subjects.txt)

3. If available the release includes a document
   indicating age and sex for each subject.
   (Release_demographics.txt)

4. Where needed peculiarities about the release are
   indicated in Release_readme.txt

5. In case of multiple parts in a Release, the above
   documents (2,3,4) are included in Release_part1.
