red dots: observed values
blue dots: fitted values
gray dots: fitted values under null hypothesis (between-subjects contrast = 0)

**Between-subjects contrast**

- 1
- AD (Alzheimer's disease)

**Between-measures contrast**

- 1
- CONN reported values average of QC_Global changes raw values at rest

**Statistics**

- beta = 0.004
- t(51) = 2.50
- p = 0.007933 (two-sided p = 0.016937)
