

S6_MP:

- Due to an error in acquisition settings (water suppression was left on), the water reference files for the GABA+ data (*GABA_68_H2O) for subjects S01–S06 are not usable. One may decide to use the water reference files for the MM-suppressed GABA data (*GABA_80_H2O) in their place as the TEs were equivalent (TE = 68 ms).
